

Advisory Alert

Alert Number: AAA20220913

Date: September 13, 2022

Document Classification Level : Public Circulation Permitted | Public

Information Classification Level : TLP: WHITE

Overview

Product	Severity	Vulnerability
IBM	Medium	Multiple Vulnerabilities

Description

Affected Product	IBM
Severity	Medium
Affected Vulnerability	Multiple Vulnerabilities (CVE-2022-35637, CVE-2022-22483, CVE-2022-34336)
Description	<p>IBM has released security updates addressing multiple vulnerabilities that exists in their IBM DB2 and IBM WebSphere Products.</p> <p>CVE-2022-35637 - IBM DbB2 for Linux, UNIX and Windows including the DB2 Connect Server is vulnerable to Denial Of Service. An attacker can exploit this by entering a malformed SQL statement into Db2expln tool.</p> <p>CVE-2022-22483 - IBM Db2 is vulnerable to an information disclosure in some scenarios due to unauthorized access caused by improper privilege management when CREATE OR REPLACE command is used.</p> <p>CVE-2022-34336 – A vulnerability that exists in the IBM WebSphere Application Server allows users to embed arbitrary JavaScript code in the Web UI thus altering the intended functionality potentially leading to credentials disclosure within a trusted session.</p> <p>IBM highly recommends to apply the necessary patch updates at your earliest to avoid issues.</p>
Affected Products	IBM Db2 V9.7, V10.1, V10.5, V11.1, and V11.5 server editions IBM WebSphere Application Server V7.0, V8.0, V8.5 and V9.0
Officially Acknowledged by the Vendor	Yes
Patch/ Workaround Released	Yes
